

How to add a blog post

Five minutes, start to finish

You can write and publish posts yourself at any time, or send us the text and we will do it as one of your monthly changes. Here is how to do it yourself.

1. Log in

Go to alderphysio.com/wp-admin and sign in with your own login, not ours.

2. Posts, then Add New

In the left menu, click Posts, then Add New Post at the top.

3. Write it

Give it a title. Press Enter and start typing. Each press of Enter makes a new paragraph. To add a heading, type `/heading` and press Enter.

4. Add a picture

Type `/image`, press Enter, then Upload. Landscape photos around 1600 pixels wide look best. Anything from your phone is fine.

5. Pick a category

On the right, open Categories and tick one. If none fit, leave it. We will tidy it up.

6. Preview, then publish

Click Preview at the top right to see it as a visitor would. Happy? Click Publish, then Publish again to confirm.

Things worth knowing

- Save Draft keeps it private until you are ready. Drafts are not visible to anyone but you and us.
- Changed your mind after publishing? Open the post, edit, and click Update. No need to tell us.
- If a post looks wrong and you cannot see why, leave it and send us the link. We will sort it.
